"Identification of a gene, ABCG5, important in the regulation of dietary cholesterol absorption.";

Nat. Genet. 27:79-83(2001).

"I FUNCTION: Transporter that appears to play an indispensable role in the selective transport of the dietary cholesterol in and out of the enterocytes and in the selective sterol excretion by the liver into bile.

"I SUBUNIT: May form heterodimers with ABCG8 or be tightly coupled the ABCG8 along a pathway regulating diatery-sterol absorption and excretion (By similarity).

"SUBCELLULAR LOCATION: Integral membrane protein (Probable).

"I SUBCELLULAR LOCATION: THE ABC TRANSPORTER FAMILY. ABCG (WHITE)

          ABCG5 along a pathway regulating diatery-sterol absorption and excretion (By similarity).

SUBCELLULAR LOCATION: Integral membrane protein (Probable).

ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; may be produced by alternative splicing.

TISSUE SPECIFICITY: Expressed in the intestine and, at lower level, in the liver.

INDUCTION: Upregulated by cholesterol feeding. Possibly mediated by the liver X receptor/retinoide X receptor (LXR/RXR) pathway.

SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. ABCG (WHITE)
                                                                                                                                                                                                                         liver into bile.

Sitosterolemia patients have hypercholesterolemia, very high levels of plant sterols in the plasma, and frequently develop tendon and tuberous xanthomas, accelerated atherosclerosis and premature coronary artery disease. SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. ABCG (WHITE) CAUTION: Seems to have a defective ATP-binding region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AF320294;

Schmitz G., Langmann T., Heimerl S.;

Role of ABCG1 and other ABCG family members in lipid metabolism.";

J. Lipid Res. 42:1513-1520(2001).

-I- FUNCTION: XENOBIOTIC TRANSPORTER THAT APPEARS TO PLAY A MAJOR ROLE
IN THE MULTIDRUG RESISTANCE PHENOTYPE OF A SPECIFIC MCF-7 BREAST
CANCER CELL LINE. WHEN OVEREXPRESSED, THE TRANSFECTED CELLS BECOME
RESISTANT TO MITOXANTRONE, DAUNORUBICIN AND DOXORUBICIN, DISPLAY
DIMINISHED INTRACELLULAR ACCUMULATION OF DAUNORUBICIN, AND
MANIFEST AN ATP-DEPENDENT INCREASE IN THE EFFLUX OF RHODAMINE 123.

-I- SUBCELLULAR LOCATION: Integral membrane protein (Probable).

SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. ABCG (WHITE)
     ATP-binding; Transmembrane;
DOMAIN 1 395
TRANSMEM 396 416
DOMAIN 417 428
                                                                                                                             Pfam; PF00005; ABC_tran; 1.

"Cloning and characterization of the white and topaz eye color genes from the sheep blowfly Lucilia cuprina.";

J. Mol. Evol. 30:347-358(1990).

-I- FUNCTION: MAY BE PART OF A MEMBRANE-SPANNING PERMEASE SYSTEM NECESSARY FOR THE TRANSPORT OF PIGMENT PRECURSORS INTO PIGMENT CELLS RESPONSIBLE FOR EYE COLOR.

-I- SUBCELLULAR LOCATION: Integral membrane protein.
-I- SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. MDR SUBFAMILY.
                                                                                                                                                                                        Garcia R.L., Perkins H.D., Howells A.J.;

Conversely, mRNA and protein expression are suppressed by lipid efflux. Induction is mediated by the liver X receptor/retinoide X receptor (LXR/RXR) pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of the ABCG subfamily.

Oldfield S., Lowry C.A., Lightman S.L.;
"Cloning and expression of a novel mammalian white family
BABC-transporter: WHITE2.";
Submitted (NOV-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: May be involved in macrophage lipid homeostasis.
-!- SUBCELLULAR LOCATION: Integral membrane protein (Probable).
-!- SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. ABCG (WHITE)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
